A Study of Things

1. Introduction

This paper describes how things work in practice. We observed a large number of examples and found that most of them behave in a predictable way under normal conditions.

A second paragraph starts here and continues for a little while longer before it ends.

- First point
- Second point
- Third point

2. Method

```
for x in things:
    measure(x)
```

The method was applied to every item in the collection, and the results were recorded carefully.

3. Results

Results were good.
